

CONTRACTOR SUBMITTAL TRANSMITTAL FORM REV. A

Owner: County of Hawaii
Contractor: Nan, Inc. **Project No.:** WW-4705R
Project Name: Hilo WWTP Phase 1 **Submittal Number:**
Submittal Title: FOR INFORMATION ONLY
TO:
From: Nan Inc.

Specification No. and Subject of Submittal / Equipment Supplier	
Spec:	Paragraph:
Authored By:	Date Submitted:

Submittal Certification	
Check Either (A) or (B):	
☐ (A)	We have verified that the equipment or material contained in this submittal meets all the requirements specified in the project manual or shown on the contract drawings with no exceptions.
☐ (B)	We have verified that the equipment or material contained in this submittal meets all the requirements specified in the project manual or shown on the contract drawings except for the deviations listed.
Certification Statement: By this submittal, I hereby represent that I have determined and verified all field measurements, field construction criteria, materials, dimensions, catalog numbers and similar data, and I have checked and coordinated each item with other applicable approved shop drawings and all Contract requirements.	
General Contractor's Reviewer's Signature: 	
Printed Name and Title:	
In the event, Contractor believes the Submittal response does or will cause a change to the requirements of the Contract, Contractor shall immediately give written notice stating that Contractor considers the response to be a Change Order.

SECTION 01357

DELEGATED DESIGN PROCEDURES

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes: Delegated Design Procedures.

1.02 GENERAL

- A. Delegated Design - Professional design services assigned to the Contractor by express delegation in the Contract Documents. Work is "Delegated Design" where the Technical Sections require the Contractor to provide professional design services and to submit signed and sealed documents from a licensed Professional Engineer.
- B. Contractor's Professional Engineer – The design professional retained by the Contractor to perform Delegated Design.
- C. Owner may require Contractor to provide professional design services for a portion of the Work by express delegation in the Contract Documents.
 - 1. Requirements of Delegated Design component as specified in the technical section and as indicated on the Drawings.
 - 2. Such delegation will specify the performance and design criteria that such services must satisfy, and the Submittals that Contractor must furnish to Engineer with respect to the Delegated Design.
- D. Contractor shall cause such Delegated Design services to be provided pursuant to the professional standard of care by a properly licensed design professional, whose signature and seal shall appear on drawings, calculations, specifications, certifications, and submittals prepared by such design professional.
 - 1. Contractor shall not be responsible for the adequacy of performance or design criteria specified by Owner or Engineer.
 - 2. Contractor is not required to provide professional services in violation of applicable Laws and Regulations.
 - 3. Such design professional shall issue certifications of design required by Laws and Regulations.
 - 4. If a Shop Drawing or other Submittal related to the Owner-delegated design is prepared by Contractor, a Subcontractor, or others for submittal to Engineer, then such Shop Drawing or other Submittal shall bear the written approval of Contractor's design professional when submitted by Contractor to Engineer.
- E. Owner and Engineer shall be entitled to rely upon the adequacy, accuracy, and completeness of the services, certifications, and approvals performed or provided by the design professionals retained or employed by Contractor under Delegated Design, subject to the professional standard of care and the performance and design criteria stated in the Contract Documents.

- F. Engineer's review, approval, and other determinations regarding design drawings, calculations, specifications, certifications, and other Submittals furnished by Contractor pursuant to a Delegated Design will be only for the following limited purposes:
 - 1. Confirming that submittal is in conformance with the performance and design criteria specified in the Contract Documents.

1.03 CONTRACTOR'S PROFESSIONAL ENGINEER

- A. Contractor or Subcontractor shall retain a licensed professional engineer to perform Delegated Design.
- B. Qualifications:
 - 1. Holding a current license to perform the specified design in the same jurisdiction as the Project site.
 - 2. Experienced in designing similar systems of similar complexity.
- C. Insurance:
 - 1. Provide Contractor's Professional Engineer's Professional Liability Insurance as specified in Special Provisions.
- D. Responsibilities:
 - 1. Review and design in accordance with system performance and design criteria stated in the Contract Documents.
 - a. Prepare written requests for clarifications or interpretations of performance or design criteria for submittal to Engineer by Contractor.
 - 2. Sign and seal design reports, calculations, design drawings and specifications, and other design Submittals for the Delegated Design Work.
 - 3. Review and submit written approval of submittals related to the Delegated Design Work.
 - 4. Design modifications to the Delegated Design Work as required.
 - 5. Visit the Site, as required, to verify that installation of the Delegated Design Work is in conformance with the Delegated Design drawings and specifications.
 - 6. Submit through Contractor to Engineer written, signed, and sealed certification that the installed Delegated Design Work complies with Contractor's professional engineer's design.

1.04 SUBMITTALS

- A. Prior to the start of Delegated Design:
 - 1. Contractor's Professional Engineer's qualifications:
 - a. Experience for the Delegated Design.
 - b. Evidence of professional engineering license.
 - 2. Contractor's Professional Engineer Professional Liability Insurance certificate.
- B. Delegated Design:
 - 1. Product data:
 - a. Details related to the Delegated Design as specified in technical sections to completely describe the system.

2. Design documents with signature and seal from the Contractor's Professional Engineer:
 - a. Design documents include but are not limited to drawings, calculations, specifications, inspection reports, and certifications.
 - b. Signature and seal shall be in accordance with HRS 16-115-9 two part statement: "THIS WORK WAS PREPARED BY ME OR UNDER MY SUPERVISION AND CONSTRUCTION OF THIS PROJECT WILL BE UNDER MY OBSERVATION."
 3. Lists and schedules:
 - a. Prepare and submit lists or schedules of items where delegated design is required by the Contract Documents.
 - b. Group items by location in the Work:
 - 1) When "Area Numbers" are indicated on the Contract Drawings, group lists in accordance with those "areas."
 - 2) For work without area numbers, group using logical divisions acceptable to Engineer.
 - 3) Group items within each "area" as follows:
 - a) Systems.
 - b) Components.
 - c) Supports.
 - d) Anchorage.
 - e) Bracing.
- C. Construction services:
1. Contractor's Professional Engineer's comments on submittals.
 2. Other construction documents, as required.

1.05 ENGINEER RESPONSE TO DELEGATED DESIGN SUBMITTALS

- A. The Engineer response will be either of the following:
1. Approved. Make Corrections Noted - See Comments:
 - a. The Contractor may proceed with the Work; however, all notations and comments must be incorporated into the final product.
 - b. The review was for the limited purpose of determining that the document was stamped by a Professional Engineer and that such design is generally consistent with and will not negatively affect the design concept presented in the Contract Documents.
 2. Rejected - See Remarks:
 - a. Contractor may not proceed with the Work described in the submittal.
 - b. The submittal does not meet the intent of the Contract Documents.
 - c. Resubmittal of complete submittal package is required with materials, equipment, methods, etc. that meet the requirements of the Contract Documents.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

2 Yr - Support Engineer EIT
1 Yr - Intern

EDUCATIONAL BACKGROUND

MS, Engineering
Management, University of
Kansas

BS, Electrical Engineering,
Missouri University of
Science and Technology

PROFESSIONAL LICENSES

Professional Engineer
CA, FL, HI, MO, PA, TX

BENEFITS TO THE DISTRICT

Delivers innovative solutions
and constructability reviews
backed by 14 years of
electrical design expertise.

Contributes to the timely
procurement of long-lead
electrical equipment.

ADAM'S ROLE

With a proven track record on high-profile water infrastructure projects, Adam leverages his knowledge to deliver innovative, high-quality solutions tailored to the complexities of design-build execution. Adam brings extensive experience in specifying, designing and integrating advanced electrical and communication systems for large-scale infrastructure projects.

As Electrical Design Lead, he manages critical electrical components to support efficient Project execution. In the preconstruction phase, Adam evaluates designs for constructability and value engineering opportunities, optimizing Project outcomes. His technical expertise contributes to the procurement of long-lead electrical equipment, helping to mitigate supply chain challenges and maintain cost and schedule reliability. During construction, Adam provides responsive technical support to resolve field discrepancies and sustain Project momentum.

PROJECT EXPERIENCE

Homer City Generation Project, Homer City LLC, Homer City, PA

Electrical Engineer of Record (June 2025 – Present) | Adam is currently the Lead Electrical engineer for the Water treatment facility portion of the Homer City Generation Project. He supports the schedule driven design by providing robust electrical system designs that support changing project needs. Thoughtful use of spare equipment, capacity, alternate sources, and back-up generation are all considered in the development of the project design methods, drawings, and calculations.

Redevelopment of the Homer City coal fired power plant into a facility consisting of seven (7) identical combined-cycle power trains in a 1x1 multi-shaft configuration. The net electrical output of the Project is 4,000 MW. This generation facility is supported by a 40 MGD water treatment facility that provides cooling water and demineralized boiler feedwater. These processes consist of clarifiers, thickeners, filter presses, Ultra-filtration, Reverse Osmosis, Electro De-ionization, and numerous chemical treatments.

Prospect Lake Clean Water Center, Prospect Lake Water L.P., Fort Lauderdale, FL

Electrical Engineer of Record (January 2023 – August 2025) |

Adam played a pivotal role in reducing project quantities through strategic electrical constructability efforts. By thoroughly analyzing design plans and identifying optimization opportunities, Adam minimized material usage and streamlined installation processes. His approach focused on refining layouts, simplifying complex

ADAM REAB, PE

Electrical Engineer

systems, and proposing alternative solutions that maintained system integrity while reducing costs and labor requirements.

The Prospect Lake Clean Water Center will replace an existing 70-year-old plant and deliver the majority of all fresh water for the City of Fort Lauderdale. The first-of-its-kind facility will feature the latest technology in nanofiltration and ion exchange water treatment, producing 50 MGD. The facility is designed to add future PFAS treatment technologies and withstand Category 5 hurricane winds. It is equipped with 10MW of onsite generation to maintain water production during prolonged outages. Construction is at a greenfield site, which currently only houses an existing well field.

San Fernando Groundwater Basin Remediation, Los Angeles Department of Water & Power, Los Angeles, CA

Electrical Engineer of Record [April 2020 – October 2023] | Adam led the electrical design which included development of specifications, calculations and design drawings. He managed the UV reactor designs and coordinated all aspects of the electrical design with the Los Angeles Department of Water & Power, site staff and the designer.

Progressive design-build of two new groundwater treatment facilities that extract water from two sets of existing, non-producing contaminated wells. These plants will treat a collective of 75 MGD with 50 MGD of groundwater at Tujunga and 25 MGD at North Hollywood. The scope for the combined sites included the installation of 6,500 feet of raw water pipelines, construction of UV buildings, and critical underground tie-ins and the addition of several pumps. The facilities also contain raw water purge systems, pre-treatment separators, 10 UV/AOP reactors, three liquid phase granular advanced carbon systems with 54 new granular advanced carbon vessels, and post-treatment systems that provide chlorination, ammonization and fluoridation.

Hill Top Energy Center, Abatis Advisors, Carmichaels, PA

Electrical Engineer of Record [August 2018 – May 2020] | Adam was the electrical engineer of record and was responsible for leading the electrical team in the development of equipment specifications, electrical system calculations, one-lines, schematics and other electrical drawings. He managed the design of the electrical distribution system and created and maintained the project schedule, managing team member assignments; reporting progress to project management; and interfacing with client, utility and construction representatives on project design items.

The project included engineering, procurement, construction and startup of a 620 MW natural gas fired combined cycle power generation plant. The facility includes a GE HA.02 combustion turbine, Alstom heat recovery steam generator, steam turbine, self-synchronizing clutch and generator connected to a 775MVA step-up transformer. Intake and discharge structures on the bank of the Monongahela River were also contained in the scope. Additional work included a 500kV single-breaker switchyard and 2.75 miles of single-circuit 500kV transmission line.

Birdsboro Power Project, Power Plant Management Services, LLC, Birdsboro, PA

ADAM REAB, PE

Electrical Engineer

Electrical Engineer [July 2016 – November 2018] | Adam was responsible for the electrical equipment enclosures and associated electrical equipment for the project. This responsibility included creating the specifications, calculations, and drawings for the procurement, manufacturing, inspection, and delivery of the electrical enclosures and associated equipment to the jobsite. These enclosures included switchgear, motor control centers, relay/metering panels, battery/UPS equipment, large dry-type transformers, and power panels. Adam was responsible for the one-lines and schematics for this equipment. Adam was also responsible for the Arc-Flash hazard analysis study to determine the incident energy levels and required PPE for this and other major plant equipment. Adam also closed out the project as the lead electrical engineer.

This project consists of a nominal 450 MW single shaft combined cycle power plant with one (1) GE 7HA.02 combustion turbine, one (1) GE heat recovery steam generator, and one (1) GE steam turbine. Both the combustion and steam turbines are coupled to the same GE generator. Kiewit was awarded the contract to engineer, procure and construct this power plant.

Charles E. Meyer Desalination Plant, City of Santa Barbara, Santa Barbara, CA

Electrical Engineer [April 2016 – January 2017] | Adam finalized the engineering design and provided equipment procurement and construction support. He managed the variable frequency drives and performed electrical system calculations, creating construction drawings; finalizing equipment manufacturing, inspections and delivery to the jobsite; and serving as the resident electrical engineer. Adam was the main point of contact for the on-site technical questions through construction and startup phases, including outage and tie-in coordination for the neighboring wastewater treatment plant. Close out activities included responding to RFIs, closing out contracts of all electrical equipment, troubleshooting field issues, compiling comprehensive test reports for all areas of the facility and issuing final as-built drawings for all electrical engineering deliverables.

This project reactivated an existing 3 MGD desalination plant originally built by the City of Santa Barbara 25 years prior and added electrical capacity for expansion up to 9 MGD. The scope consisted of demolishing the existing facility and installing new concrete foundations, modular reverse osmosis and desalination technology.

Multiple Projects, Kansas City, KS

Lead Estimator [June 2014 – April 2016] | Over the course of his role in the estimating department Adam lead a varying team of engineers through twelve projects. The projects consisted mainly of power generation facilities utilizing natural gas combustion turbines typically combined with secondary generation steam turbines. The power generation projects ranged from a 500MVA output simple cycle plant to a combined cycle plant with a net output of over 1500MVA. Other notable projects include a 25MVA steam turbine only geothermal project in Mexico, an experimental wind generation project with two 6MVA turbines off the coast of Virginia, and a 100MW Li-ion energy storage facility in California.

Throughout the course of the estimate projects, Adam was responsible for developing budgets for the construction of the electrical system. These budgets included costs for equipment, permanent materials including conduit and cable, manpower, incidental tools and supplies, and various subcontracts for discrete systems including site security, lightning protection, and heat tracing. It was then his responsibility to present these budgets to department,

ADAM REAB, PE

Electrical Engineer

district, and executive management in a Stage-Gate style review process. During each review detailed questions about the design approach and engineering decisions made during the estimate development were addressed. After incorporating management's input from each review, Adam and the project team prepared the relevant engineering and budget documents for presentation to the client and make them ready for turnover to the project execution teams.

Homer City AQCS Project, EFS/NRG Energy, Homer City, PA

Electrical Engineer, Electrical Resident Engineer [May 2012 – October 2015] | Adam was responsible DC/UPS and Heat Tracing systems. This responsibility included creation of specifications, calculations, and drawings for procurement, manufacturing and delivery of the equipment to the jobsite. He was also responsible for the cable ampacity calculation, lightning protection calculation, and circuit writing team for all plant equipment. Adam also served as the electrical resident engineer where he was the main point of contact for the on-site technical questions through the construction and start-up phases of the project. He also closed-out the project as the lead electrical engineer, which included responding to RFIs, closing out contracts, issuing MCRs, troubleshooting field issues, warranty issues, superseding calculations, and issuing the final as-built drawings for all electrical engineering deliverables.

This project consisted of two dry type ACQS flue gas desulfurization units each serving a 733MVA coal fired boiler.

Wayne County Project, Progress Energy Carolinas, Goldsboro, NC

Electrical Engineering Intern [May 2011 – August 2011] | Adam was responsible developing wiring interconnection diagrams for power and control circuits. This included cable selection, termination, and database management. In addition, he assisted in detailed drafting and development of electrical schematic diagrams to ensure alignment with the interconnection diagrams and circuit schedules.

The project consisted of F-class combustion turbine technology which utilizes natural gas as the primary fuel with distillate fuel oil as a back-up fuel with dual fuel ultra low NOx burners. The facility design consisted of three combustion units and one steam unit in a 3x1 combined cycle power plant configuration.
